ISSUE: Special exception to construct an addition in the required side yard.

CODE SECTION	SUBJECT	CODE REQUIREMENT	APPLICANT PROPOSES	REQUESTED EXCEPTION
3-306(A)(2)	East Side Yard	8.00 feet*	7.10 feet	0.90 feet

**Based on a building height of 13.92 feet measured from average existing grade to the height of the roof along the east side yard.*

The applicants must submit a survey plat confirming building footprint, height and setbacks and certification of floor area ratio a licensed surveyor, architect or engineer prior to all final inspections. The special exception must also be recorded with the deed of the property in the City's Land Records Office prior to the release of the building permit.

I. Issue

The applicants, Michael D. Gill and Brooke C. Gill, propose to add a new addition to their existing dwelling located at 1031 Cross Drive. The proposed addition would be to the rear of the existing dwelling and would increase the square footage on the second floor. The applicants request a special exception to construct a portion of the proposed rear addition in the required east side yard.

II. Background

The subject property is a substandard lot of record with 50.00 feet of frontage along Cross Drive and a lot size of 5,000 square feet. As such, it complies with the R-8 zone's minimum lot frontage but not lot size nor width requirements. Single-family dwellings surround the subject property.

Figure 1 - Subject Property

A single-family dwelling occupies the subject property. City Real Estate records indicate the one-and-a-half story dwelling was constructed in 1940. It provides a 9.10-foot west side yard, a 7.00-foot east side yard, 25.20-foot front yard, and a 49.00-foot rear yard. With the proposed addition, the dwelling would contain 1,740.90 square feet of net floor area.

The following table provides a breakdown of all applicable zoning regulations as they pertain to the proposal:

R-8 Zone	Required/Permitted	Existing	Proposed
Lot Area	8,000 Sq. Ft.	5,000 Sq. Ft.	No change
Lot Width	65.00 Ft.	50.00 Ft.	No change
Lot Frontage	40.00 Ft.	50.00 Ft.	No change
Front Yard	25.00 Ft. (minimum)	25.20 Ft.	No change

Side Yard (East)	8.78 Ft. 1:2 height-to-setback ratio	7.00 Ft.	No change*
Side Yard (West)	8.78 Ft. 1:2 height-to-setback ratio	9.1 Ft.	No change*
Rear Yard	13.3 Ft. 1:1 height-to-setback ratio	49.00 Ft.	41.00 ft
Height	30.00 Ft.	17.50 Ft.	22.35 Ft.
Net Floor Area	1,750 Sq. Ft. 0.35 FAR	1,165 Sq. Ft.	1,740.90 Ft. 0.348 FAR

**The setback will not change, but the required setback will change as the height of the dwelling at the east and west side yards has lowered from 17.56 to 13.92.*

III. Description

The applicants propose construct a one-story addition at the east corner of the existing dwelling and to increase the square footage of the second floor. The rear addition would allow for the expansion of the existing kitchen and would measure 8.00 by 21.19 feet, with a 12.00 by 6.00-foot addition to the west for a new mudroom and pantry. At 13.92 feet in height (as measured from average pre-construction grade), an 8.00-foot side yard would be required based on the R-8 zone's 1:2 height-to-setback ratio, minimum 8-foot side yard setback. The addition would be an extension of the existing noncomplying wall that is 7.00 feet from the east side yard property line, however, the addition would be roughly 1.00 inch farther away from the east side property line that the existing building wall. As such, the addition would require a special exception of 0.90 feet. The applicant is also proposing to alter the existing second story and change from a side-facing gable to a front-facing gable with dormers. This alteration will bring the height along the east side yard from 17.56 feet to 13.92 feet, reducing the required side yard setback from 8.78 feet to a minimum 8.00 feet.

The proposal would comply with all other zoning regulations and there have been no variances or special exceptions previously granted for the subject property.

IV. Noncomplying Structure/Substandard Lot

The existing lot is substandard and the existing dwelling is a noncomplying structure with respect to the following:

	Required	Provided	Noncompliance
Side Yard (East)	8.78 Ft.	7.00 Ft.	1.78 Ft.

Lot Size	8,000 Sq. Ft.	5,000 Sq. Ft.	3,000 Sq. Ft.
Lot Width	65.00 Ft.	50.00 Ft.	15.00 Ft.

V. Master Plan/Zoning

The subject property has been zoned R-8/Residential Single-Family since adoption of the Third Revised Zoning Map in 1951. The North Ridge/Rosemont Small Area Plan identifies the property for residential land use.

VI. Requested Special Exception

3-306(A)(2) Side yard (East)

Zoning Ordinance section 3-306(A)(2) requires a side yard based on a 1:2 height-to-setback ratio with a minimum depth of 8.00 feet. Figure 2, below, shows the existing dwelling's established noncomplying plane as it relates to the required east side yard. Any construction along one plane within the area shaded in blue would require a special exception from the side yard requirement. The area shaded in red shows the portion of the proposed addition that requires a special exception and the area shaded in green shows the portion of the proposed addition that complies with zoning.

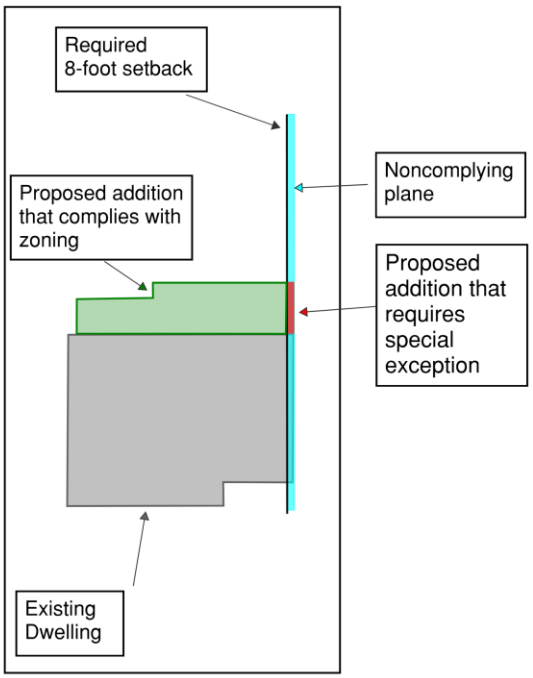

Figure 2 – Special Exception Diagram

Because the proposed rear addition would expand the existing dwelling 8.00 feet to the rear within the required side yard along the existing noncomplying building wall, special exception approval is required. Based on the 1:2 setback ratio with an 8.00-foot minimum

setback, the proposed rear addition height of 13.92 feet would require a setback of 8.00 feet. The applicants request a special exception of 0.90 feet to construct the proposed addition 7.10 feet from the east side property line.

VII. Special Exception Standards

Per Zoning Ordinance section 11-1304, the Board of Zoning Appeals "must find that the strict application of the ordinance creates an unreasonable burden on the use and enjoyment of the property which outweighs the material zoning purpose for which the specific provision of the ordinance at issue was designed." Section 11-1304 also states that the Board of Zoning Appeals "shall consider and weigh the following issues, as applicable:"

1) Whether approval of the special exception will be detrimental to the public welfare, to the neighborhood or to the adjacent properties.

   The proposed one-story rear addition would extend the existing noncomplying wall in the required east side yard by 8.00 feet. Because of the modest increase in the required east side yard, staff finds that approval of the request would not be detrimental to the public welfare, neighborhood or adjacent properties.

2) Whether approval of the special exception will impair an adequate supply of light and air to the adjacent property, or cause or substantially increase traffic congestion or increase the danger of fire or the spread of fire or endanger the public safety.

   Approval of the special exception would not impact light and air supply to adjacent properties, cause or substantially increase traffic congestion or increase fire risks due to the proposed one-story addition's modest increase of within the required east side yard in line with the dwelling's existing east-facing noncomplying building wall.

3) Whether approval of the special exception will alter the essential character of the area or zone.

   Because the proposal represents a modest change, it would not alter the essential character of the area or zone. The proposed addition would be located at the dwelling's rear and would be minimally visible from the street.

4) Whether the proposal will be compatible with the development in the surrounding neighborhood.

   Because of the addition's modest increase in square footage within the require east side yard setback, the proposal would not affect the existing dwelling's compatibility with development in the surrounding neighborhood.

5) Whether the proposed development represents the only reasonable means and location on the lot to accommodate the proposed structure given the natural constraints of the lot or the existing development of the lot.

Due to the narrowness of the subject property, location of the existing dwelling, and interior layout of the dwelling, the proposal is the only reasonable location for the rear addition to accommodate the kitchen expansion.

VIII. Staff Conclusion

Neighborhood Impact
The modest increase in square footage within the required east side yard would be minimally visible to surrounding properties. It would have no impact to the neighborhood.

Light and Air
Based on the height, size and location of the proposed addition, staff finds that it would have minimal effect on light and air supply to adjacent properties.

Lot Constraints
Due to the subject property's narrowness and size, it is substandard for the R-8 zone. The applicants' proposal would represent the least impactful and most reasonable location for an addition.

As outlined above, staff **recommends approval** of the request subject to compliance with all applicable codes, ordinances and recommended conditions found in the departmental comments of this report.

A. FOR SI: 1 INCH=25.4 mm, 1 FOOT = 304.8 mm, 1 POUND PER SQUARE FOOT= 0.0479 kPa; 1 POUND PER SQUARE FOOT PER FOOT= 0.157 kPa/mm
B. SOIL CLASSES ARE IN ACCORDANCE WITH THE UNIFIED SOIL CLASSIFICATION SYSTEM. REFER TO TABLE R405.1 IN THE IRC 2015.
C. UNBALANCED BACKFILL HEIGHT IS THE DIFFERENCE IN HEIGHT OF THE EXTERIOR AND INTERIOR FINISH GROUND LEVELS. WHERE THERE IS AN INTERIOR CONCRETE SLAB , THE UNBALANCED BACKFILL HEIGHT SHALL BE MEASURED FROM THE EXTERIOR FINISH GROUND LEVEL TO THE TOP OF THE INTERIOR CONCRETE SLAB.
D. THE SIZE AND SPACING OF VERTICAL REINFORCEMENT SHOWN IN THE TABLE IS BASED ON THE USE OF REINFORCEMENT WITH A MINIMUM YIELD STRENGTH OF 60,000 PSI. VERTICAL REINFORCEMENT WITH A MINIMUM YIELD STRENGTH OF 40,000 PSI OR 50,000 PSI IS PERMITTED, PROVIDED THE SAME SIZE BAR IS USED AND THE SPACING SHOWN IN THE TABLE IS REDUCE BY MULTIPLYING THE SPACING BY 0.67 OR 0.83, RESPECTIVELY.
E. VERTICAL REINFORCEMENT, WHEN REQUIRED, SHALL BE PLACED NEAREST THE INSIDE FACE OF THE WALL A DISTANCE d FROM THE OUTSIDE FACE (SOIL SIDE) OF THE WALL THE DISTANCE d IS EQUAL TO THE WALL THICKNESS, t, MINUS 1.25 INCHES PLUS ONE-HALF THE BAR DIAMETER, db (d=t-(1 25+db/2)). THE REINFORCEMENT SHALL BE PLACED WITHIN AA TOLERANCE OF +/- 3 8 INCH WHERE d IS LESS THAN OR EQUAL TO 8 INCHES, OR +/- 1 2 INCH WHERE d IS GREATER THAN 8 INCHES.
F. CONCRETE COVER FOR REINFORCEMENT MEASURED FROM THE INSIDE FACE OF THE WALL SHALL NO BE LESS THAN 3 4 INCH. CONCRETE COVER FOR REINFORCEMENT MEASURED FROM THE OUTSIDE FACE OF THE WALL SHALL NOT BE LESS THAN 1-1/2 INCHES FOR NO. 5 BARS AND SMALLER AND NOT LESS THAN 2 INCHES FOR LARGER BARS.
G. ALL FOOTINGS TO BE 2'-6" MINIMUM BELOW GRADE FROST DEPTH.
H. THE MINIMUM THICKNESS IS PERMITTED TO BE REDUCED 2 INCHES, PROVIDED THE MINIMUM SPECIFIED COMPRESSIVE STRENGTH OF CONCRETE f'c, IS 4,000 PSI.
I. "PC" MEANS PLAN CONCRETE.

FLASHING GENERAL NOTES

THE DETAILS ON THIS PAGE ARE IN NO WAY INTENDED TO REPRESENT A COMPLETE LIST OF THE LOCATIONS IN A BUILDING THAT REQUIRE FLASHING. THESE DETAILS ARE INTENDED TO HELP TO CLARIFY SOME OF THE STANDARD SITUATIONS THAT ARE COMMON IN RESIDENTIAL CONSTRUCTION. THE GENERAL CONTRACTOR IS RESPONSIBLE FOR ALL OF THE FLASHING CONDITIONS AND THE PREVENTION OF WATER INTRUSION IN THE BUILDING. ALL FLASHING SHOULD BE INSTALLED TO MANUFACTURE SPECIFICATIONS.

DOOR AND WINDOW FLASHING :

FLASHING OVER A WOOD DOOR AND WINDOW HEAD SHALL EXTEND UP THE WALL A MINIMUM OF 4" AND IS NAILED TO THE SHEATHING. SHEET METAL IS RECOMMENDED FOR THIS FLASHING

FLASHING UNDER A WOOD WINDOW IS INSTALLED BEFORE SILLS ARE SET INTO PLACE. SHEET METAL IS RECOMMENDED FOR THIS FLASHING.

DECK FLASHING @ OPEN DECKS

WALL FLASHING SHOULD EXTEND A MINIMUM OF 4" ABOVE THE FINISHED DECK,AND MUST ALLOW FOR A 4" LAP BY THE FINAL WALL FINISH. THE METAL SHOULD ALSO EXTEND OUT OVER THE LEDGER OR JOIST AT A 5 DEGREE SLOPE. WHERE THIS FLASHING CROSSES A TRANSVERSE BEAM OR JOIST CARRYING THE DECK PLANKS, THE BEAM OR JOIST IS NOTCHED TO ACCEPT THE METAL.

PROPER FLASHING IS ALSO CRITICAL BELOW ANY BEAMS UNDERNEATH DECKS OR WALLS AND SHOULD BE SIMILARLY FLASHED WITH A STANDARD Z-FLASHING.

OPEN PLANK DECKS. TYPICAL ATTACHED TO THE SILL LINE OF THE BUILDING WITH BOLTS, REAUIRE FLASHING. THE FLASHING SHALL RUN UP THE WALL A MINIMUM OF 4" ABOVE THE FINISHED DECK. IT SHALL CONTINUE VERTICALLY DOWN THE SHEATHING, OR LEDGER IF PRESENT, TERMINATING IN A HEMMED DIVERTER BELLOW THE DECK.

DECK FLASHING @ COATED DECKS

DECK TO WALL FLASHING --- WHEN THE DECK SURFACE MEETS A WALL, THE MEMBRANE OR COATING TYPICALLY EXTENDS A MINIMUM OF 4" UP THE WALL BEFORE IT MEETS THE EXTERIOR FINISH. (COATING MANUFACTURERS HAVE THEIR OWN SPECIFICATIONS). PRIOR TO INSTALLING THE MEMBRANE OR COATING, THIS CORNER SHOULD BE FLASHED WITH A SHEET METAL BACKING (GALVANIZED STEEL, COPPER, OR OTHER METAL SPECIFIED BY THE COATING MANUFACTURER) THE EXTENDS A MINIMUM OF 4" UP UNDER THE EXTERIOR FINISH AND 4" OUT ONTO THE DECK. THE HORIZONTAL FLANGE IS FASTENED EVERY 3 IN., OR AS RECOMMENDED BY THE MANUFACTURER AND THE JOINTS ARE SEALED. AT THE DECK EDGE THE SHEET METAL SHOULD EXTEND OUT OVER THE FRONT FACE WITH A MINIMUM 4" COVERAGE, AND TERMINATE IN A HEMMED DIVERTER.

WHERE A DECK EDGE MEETS A CONTINUOUS WALL, IT OFTEN INCORPORATES A SHEET METAL DIVERTER - AN EXTENSION OF THE DECK EDGE THAT IS PERPENDICULAR TO THE WALL. THIS DIVERTER IS TYPICALLY 4 IN. TALL AND EXTENDS 4 IN. BEYOND THE EXTERIOR FINISH. SOME INSTALLATIONS MAY ALSO REQUIRE A WALL FLANGE THAT EXTENDS BEYOND THE DECK EDGE TO GUARD AGAINST SPLASHBACK.

POSTS ---- THE EDGES AND CORNERS OF COATED DECKS FREQUENTLY INCORPORATE VERTICAL OSTS IN THE FORM OF RAILING NEWELS OR PRIMARY STRUCTURAL SUPPORTS FOR THE DECK. SQUARE OR ROUND, THESE FEATURES MUST BE FLASHED CAREFULLY TO ENSURE THEIR LONGEVITY.

TYPICAL POST FLASHING INVOLVES CUTTING A REGLET OR KERF IN THE POST TO ACCEPT EITHER A ONE-PIECE OR TWO- PIECE SYSTEM OF COPPER, GALVANIZED STEEL, OR OTHER METAL SPECIFIED BY THE COATING MANUFACTURER. IN A TWO-PIECE SYSTEM BASE FLASHING EXTENDS UP TO THE REGLET AND ONTO THE DECK, WHERE IT IS SECURED WITH COMPATIBLE FASTENERS. THE DECK COATING OR MEMBRANE COVERS THIS FLASHING UP THE POST AS SPECIFIED BY THE MANUFACTURER. COUNTER FLASHING, SECURED IN THE REGLET WITH APPROPRIATE SEALANT, EXTENDS DOWN THE POST OVER THE BASE FLASHING A MINIMUM OF 4 IN.

WHERE THE POST APPREARS AT A DECK CORNER, THE REGLET WILL NEED TO BE CUT IN TWO FACES OF THE POST. THE GEOMETRY OF THE CORNER USUALLY DEMANDS A TWO-PIECE SYSTEM, WITH BASE AND COUNTER FLASHINGS FABRICATED AS CORNERS, AND ALL JOINTS SEALED.

SHEET METAL FLASHING OVERVIEW

SPECIFICATIONS ARE FROM THE "RESIDENTIAL SHEET METAL GUIDELINES", SHEET METAL AND AIR CONDITIONING CONTRCTORS' NATIONAL ASSOCIATION (SMACNA). ALL FLASHING FOLLOW THE MANUFACTURES INSTALLATION SPECIFICATIONS GUIDE LINES.

(1) One row of fasteners permitted (two at abutting panel edges) for diaphragms. Stagger nails when using 4" on-center spacing and maintain ⅜" joist and panel edge distance. For other applications, multiple rows of fasteners are permitted if the rows are offset at least .5" and staggered.

(2) Can be reduced to 4" on-center if nail penetration into the narrow edge is no more than 1 ½" (to avoid splitting).

+ Recommended nailing is 12" on-center in field and 6" on-center along panel edge. Fastening requirements on engineered drawings supersede recommendations listed above.

+ iLevel recommends using a non-polyurethane subfloor adhesive on all contact points between panels and floor framing.

+ Nailing rows must be offset at least ½" and staggered.

+ 14 ga. staples may be substituted for 8d (0.113" x 2½") nails if minimum penetration of 1" into the TJI® joist or rim board is achieved.

+ Maximum spacing of nails is 18" on-center for TJI® joists.

INSTALLATION TIPS

Subfloor adhesive will improve floor performance, but may not be required.

Squash blocks and blocking panels carry stacked vertical loads (details B1 and B2). Packing out the web of a TJI® joist (with web stiffeners) is not a substitute for squash blocks or blocking panels.

When joists are doubled at non-load bearing parallel partitions, space joists apart the width of the wall for plumbing or HVAC.

Additional joist at plumbing drop (see detail).

Rectangular holes based on measurement of longest side.

- Holes may be located vertically anywhere within the web. Leave ⅛" of web (minimum) at top and bottom of hole.
- Knockouts are located in web at approximately 12" on-center; they do not affect hole placement.
- For simple span (S' minimum), uniformly loaded joists used in residential applications, one maximum size round hole may be located at the center of the joist span provided that no other holes occur in the joist.
- Distances are based on the maximum uniform loads from current iLevel specifier's guides. For other load conditions or hole configurations use iLevel® TJ-Beam® software or contact your iLevel representative.
